

Global Pandemic Project

There is a rapidly spreading virus overtaking the entire globe. All citizens have been ordered to shelter in place to curb the spread. The military is setting up mobile hospitals and command centers to perform testing and care for the sick. These people need to be fed. You are a culinary specialist in the military. You need to feed 3,000 people breakfast, lunch, and dinner every day for 3 weeks.

1. What items will you need to set up your mobile kitchen? Include shelter, kitchen equipment, serving pieces, small wares, utensils, cleaning supplies, storage/transportation items.
2. How will you organize meal service to avoid further spread of the disease?
3. What are the top 15 items on your ordering list for food? Think of items that are non-perishable, easy to store/transport, and are cost effective for feeding thousands of people.
4. Utilizing your top ten items, write a menu for 3 days of breakfast, lunch, and dinner service that can be produced in a mobile or outdoor kitchen for 3,000 people.
